

## THE BREWING GUIDE

step by step guide for installing machine

# THE BEER MACHINE<sup>®</sup>

**Important:** Read Instructions carefully & watch easy guide video for installation before using the Beer Machine.

Abhijit Impex (India) Pvt. Ltd.

# Inside the *box*

**1**

**Spigot, Delivery Tube & Float**

**5 nos. of CO2 Tubes**

**2**

**3**

**Pressure Control Valve**

**Defoamer Discs**

**4**

**5**

**One Pack of Beer Mix**

**Rubber Seals**

**6**

**7**

**Brewer's Yeast** (Inside Beer Mix Pouch)

**Carbonation Unit**

**8**

# Assembling **beer machine**

Watch supplied Video DVD before assembling the machine.

- 1** | Take out the beer machine from box. You can find a tray and Main seal at the bottom of the box.

- 2** | Open Clamps of Machine.

- 3** | Follow instructions.

Assemble Spigot, Delivery Tube & Float in lower part of Machine

Assemble Carbonation Unit in Upper Part of Machine

Assemble Pressure Control Valve

Assemble Main Seal (Make sure to keep it into warm water for few minutes before assembling)

Final Assembly by sliding clamps

Operating Pressure Test (Leakage Test)

*(Make sure to follow the detailed instruction given in Video DVD)*

**You MUST do the pressure test before putting the Machine for Brewing.**

## Helpful Hints

1. After adding water, beermix and brewer's yeast keep the machine in room temperature for at least 72 hours. You will notice that self generated CO2 will show 15 gauge on PSI meter. Make sure that you do not add additional CO2 during this time by using CO2Tube.
2. Transfer the machine into refrigerator after 72 hours for more 2 to 3 days. During this time, naturally generated CO2 will absorb in the beer and you can see that PSI meter is showing less than 15 gauge.
3. After chilling the beer you have to add additional CO2 as and when needed. Please note that CO2 tube contains only 8 grams of CO2 so you have to replace it when it's empty. Please do not add large amount of CO2 at one time. Add CO2 only in short bursts periodically.
4. Please note that bottling the beer is NOT POSSIBLE without using BOTTLING KIT.

*You are ready to brew your first beer at home...*
